

Presentation Mode – All sites will see each other continuously within a pattern (A), except when a site speaks - that site will pop up full screen for the other sites to see (B). The site speaking will see those sites they are speaking to (A). This mode works excellent for classes/meetings that encourage site to site interaction.

Lecture Mode – Participating sites will ALWAYS view the originating site (lecturer) full screen (A). Participating sites will never see each other, but will be able to hear each other. The lecturer has the choice of seeing a pattern (B) or full screen (C), which will rotate on a 5 second timer. This mode works well for classes that do not have much site to site interaction and an instructor that uses the document camera/presentation computer a lot (math, accounting, etc).
